NOMAN ZULFIQAR

DevOps Engineer | AWS Certified Solutions Architect – Associate

Lahore, Pakistan | chnoman1213@gmail.com | +92 331 4748582

LinkedIn | Portfolio

PROFESSIONAL SUMMARY

DevOps Engineer and AWS Certified Solutions Architect – Associate with production experience across AWS and Azure. Currently own the infrastructure of a live payment gateway: PHP application servers on EC2 (Apache, Nginx, PHP-FPM), RDS MySQL, GitHub Actions CI/CD, serverless automation with Lambda and EventBridge, server security, backups, and PCI DSS compliance alerting. Previously delivered client and enterprise platforms for software houses, including multi-environment Amazon EKS clusters, zero-downtime Kubernetes upgrades, GitOps with ArgoCD, a 100+ school LMS on ECS Fargate, and a zero-downtime Azure migration, all built with Terraform. Writes runbooks and technical documentation for every project.

EDUCATION

Bachelor of Science in Computer Science **Nov 2021 – Jun 2025**
University of Management & Technology, Lahore

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

TECHNICAL SKILLS

AWS: EC2, VPC, S3, RDS (MySQL, Aurora, Multi-AZ), Lambda, EventBridge, CloudWatch, Route 53, CloudFront, ALB/NLB, ACM, IAM, Cognito, ECS Fargate, ECR, EKS, EFS, ElastiCache (Redis, Valkey), Security Hub, Managed Blockchain

Azure: AKS, Cosmos DB, Storage Accounts, Redis, Service Bus, Azure Firewall, hub-spoke networking, multi-subscription environments

Containers & Kubernetes: Docker, Docker Compose, Kubernetes (EKS, AKS), Helm, Karpenter, ArgoCD, ALB Ingress, Secrets Store CSI Driver, cluster upgrades

CI/CD & Source Control: GitHub Actions (OIDC), GitLab CI/CD, Jenkins, Git, GitHub, branching, pull requests, Helm atomic deployments, zero-downtime deployments, automated rollbacks

Infrastructure as Code: Terraform, AWS CloudFormation, Ansible, Chef

Linux & Web Servers: Ubuntu, Debian, systemd, user & service management, SSH, cron, server hardening, fail2ban, Apache, Nginx, PHP-FPM, Composer, Certbot

Databases: MySQL, MongoDB Atlas, Redis, Valkey, Cosmos DB, phpMyAdmin; snapshots, backups, data archival, disaster recovery

Monitoring & Operations: Amazon CloudWatch, Prometheus, Grafana, logging, alerting, incident triage, root-cause troubleshooting, maintenance windows

Security: IAM least privilege, secrets management, OIDC, MFA, RBAC, SAML SSO (Azure AD), encryption, SSL/TLS, AWS Security Hub (PCI DSS standard), Cloudflare proxy, WireGuard VPN

Networking: VPC design, security groups, DNS, load balancing, TCP/IP, ports, VPN, network troubleshooting

Scripting & Documentation: Bash, Python; runbooks, technical documentation

PROFESSIONAL EXPERIENCE

DevOps Engineer (Part-Time) | Zpayso | Lahore **Jan 2026 – Present**
Product company: cloud-native payment gateway used by multiple merchants

- Own the AWS infrastructure for the payment gateway across sandbox and production: EC2, RDS MySQL, S3, Route 53, Lambda, EventBridge, CloudWatch, VPC networking, and IAM.
- Manage five EC2 servers: the payment gateway API, the merchant portal, the redirect service, a merchant bot server (set up from scratch to send payment gateway information and messages to merchants), and a database archival server.
- Configure and run the core PHP application stack on Linux, using Apache or Nginx as the web server with PHP-FPM and Composer, connected to Amazon RDS MySQL and managed through phpMyAdmin.
- Built and maintain CI/CD pipelines with GitHub Actions, with source code on GitHub, delivering zero-downtime deployments and automated rollbacks.
- **Month-end database archival automation:** An EventBridge schedule triggers a Lambda function that starts the archival EC2 instance and runs a Python script. The script creates a schema for the closing month, moves the high-volume transactions and payouts tables into it, and truncates the live tables to reduce production database load. The instance is stopped after each run to save cost.

- Implemented caching with Amazon ElastiCache for Valkey.
- Secured servers with fail2ban, SSL/TLS certificates via Certbot, and AWS Security Hub with the PCI DSS standard enabled for compliance alerting. Put the company WordPress website behind Cloudflare's proxy so only filtered traffic reaches the host.
- Maintain RDS snapshots, monthly archives, and disaster recovery procedures, keeping production payment services available 24/7 outside scheduled maintenance windows.
- Set up CloudWatch monitoring, logging, and alerting. Automated SSL/TLS certificate renewal with Python Lambda functions, and wrote daily cron jobs on EC2 that report server and API health.

Associate Cloud Engineer | GenClouds | Lahore **Apr 2025 – Jul 2026**

Cloud consultancy: client and enterprise projects for software houses and their customers on AWS and Azure

- Delivered enterprise cloud projects on AWS and Azure for multiple external clients, working directly with client stakeholders on requirements and deployment status.
- Implemented Infrastructure as Code with Terraform across projects, automating provisioning and applying DevOps best practices.
- Wrote runbooks and technical documentation for every completed project. Key projects are listed below.

Cloud Engineer Intern | GenClouds | Lahore **Dec 2024 – Mar 2025**

- Earned the AWS Certified Solutions Architect – Associate certification while gaining hands-on experience with AWS cloud services and core DevOps tools.
- Built foundational skills in CI/CD pipeline management, automation, and cloud infrastructure management.

KEY PROJECTS

AWS Cloud-Native Platform & EKS Lifecycle Management **GenClouds**

- Deployed production-grade AWS infrastructure across 3 environments with Terraform: EKS with Karpenter autoscaling, RDS MySQL (Multi-AZ), ElastiCache Redis, Cognito with Azure AD SAML, ALB Ingress, and Secrets Store CSI Driver.
- Built GitHub Actions CI/CD with OIDC authentication to AWS IAM and Helm atomic deployments.
- Upgraded EKS from 1.34 to 1.35 and Karpenter from 1.6.0 to 1.13.0 with zero downtime. This involved validating add-on compatibility, scanning for deprecated APIs, and rotating nodes in a controlled way using disruption budgets.

ArgoCD GitOps on AWS EKS **GenClouds**

- Deployed production-ready ArgoCD on EKS with SSL/TLS termination, IAM RBAC policies, and persistent Redis storage for automated continuous deployment.

Azure Multi-Environment Infrastructure Migration **GenClouds**

- Executed a zero-downtime production migration to a hub-spoke Azure architecture spanning 4 subscriptions and 5 environments (dev, beta, staging, prod, POC), including AKS clusters.
- Built 7 Terraform stacks managing 50+ Azure resources, including a 7 TB Cosmos DB, AKS, Storage Accounts, Redis, Service Bus, and Azure Firewall.
- Implemented CI/CD pipelines with validation, monitoring, and rollback procedures, reaching 100% Infrastructure as Code coverage.

Learning Management System Infrastructure **GenClouds**

- Built and maintained AWS infrastructure for an LMS platform serving 100+ schools, managing 109+ Terraform resources across EC2, RDS, and load balancers.
- Deployed a multi-environment architecture with ECS Fargate, RDS Aurora, EFS, and load balancers, with automated CI/CD pipelines and monitoring.

Enterprise Identity Management Platform on AWS **GenClouds**

- Deployed a secure, cloud-native user management system on AWS using Terraform and CI/CD automation.
- Built a React-based admin panel integrated with Amazon Cognito for centralized user administration, real-time user operations, and MFA management.

Additional Projects **GenClouds**

- **Hyperledger Fabric on Amazon Managed Blockchain:** Secure, multi-organization enterprise blockchain infrastructure with decentralized identity management, following Zero Trust principles.
- **Rocket.Chat on AWS:** Deployed on ECS Fargate with MongoDB Atlas, with infrastructure automated through Terraform.
- **Cross-account S3 data sharing:** Private, encrypted connectivity for sharing large research datasets between AWS accounts.
- **WireGuard VPN on EC2:** VPN server with preconfigured client setup for secure connectivity.
